Networking Assignment

1. Find your board's IP address using `ifconfig` command.

2. Check connectivity between your board and PC using the `ping` command.

3. From your PC, download the home page of the webserver running on `shark` (Tip: URL is `http://shark/`)

4. From your board, try remote login to the board from your PC using `ssh` command.

5. Copy a file from your PC to the user `root` on your board using the `scp` command. (Tip: Destination is `root@<board ip-address>:~/`)

6. Check if the file has been copied by remote logging in to the board as user `root`.

7. Copy the file back to your PC to a different folder using the `scp` command.
